引出“伽利略” (笔记最后修改于:2026-03-25 09:23:10)

『Galileo 伽利略(1564-1642)』

Italian physicist and astronomer, who initiated the scientific revolution that flowered in the work of the English physicist Sir Isaac Newton.
His main contributions were, in astronomy, the use of the telescope in observation and the discovery of sunspots, lunar mountains and valleys, the four largest satellites of Jupiter.
He discovered that the planets moved around the sun, which confirmed Copernicus' theory and overthrew Ptolemaic system of astronomy.
In physics, he discovered the laws of falling bodies. In the history of culture, Galileo

stands as a symbol of the battle against authority.
He died in 1642. At the same year, the great physicist Isaac Newton was born.
As it happened, he died on January 8, 1642, and 300 years later, that is January 8, 1942, another great theoretical physicist Stephen Hawking was born.

※ In his own lifetime Galileo was the centre of violent controversy, but the scientific dust has long since settled, and today we can see even his famous clash with the Inquisition in something like its proper perspective.

『 **in / during one's lifetime** 在…的一生中 』

- He achieved a lot **in his short lifetime**. 他在短暂的一生中取得了很多成就。
- **During her lifetime** she had witnessed two world wars. 在她的一生中，她见证了两次世界大战。

All this will not be finished in the first one hundred days. Nor will it be finished in the first one thousand days; nor **in the life of this Administration**; nor even perhaps **in our lifetime** on this planet. But let us begin.
这一切不会在头一百天完成，也不会在头一千天完成，也不会在这届政府期间完成，甚至可能不会在我们这一生中完成。但让我们现在就开始。

sth. of a lifetime / one's life 某人一生中最好的一件事	It was **the vacation of a lifetime**! 那是一生中最棒的假期！
